

Inversions Under Siege: Treasury's Latest Countermeasures

Over the last few years, several U.S. companies have engaged in tax-motivated inversion transactions with foreign companies that resulted in the U.S. company becoming a subsidiary of the foreign company. These inversion transactions, which have allowed for a significant reduction in U.S. taxes, have attracted attention from both Congress and the IRS. Recently, the IRS issued a broad set of regulations designed to halt inversions. These measures were very broad, attempting not only to halt the inversions or other actions now swept within that term, but also other steps taken by companies before and after an inversion to lower U.S. taxes. Investors and their advisers, as well as their lenders, need to understand the scope of what was done to ensure that new funds invested in, or lent to, companies embarking on reorganizations with foreign companies do not get caught in the new rules' web, which could adversely impact the expected return.

PHILIP R. HIRSCHFELD

The wave of inversions that has occurred over the last few years has directly affected investment and pension funds that own equity interests in companies desiring to do inversions so as to increase their value. Investment funds, banks, and financial institutions are also lenders to these companies and their consent to a change in corporate structure that occurs in an inversion is needed. In addition, many financial institutions have been actively assisting in the financing of inversions, or in many of the steps occurring prior to or after an inversion, to reduce a tax challenge and lower the group's global tax exposure.

This inversion activity came to a crushing halt in the spring of 2016, when the U.S. Treasury Department issued a broad set of regulations designed to stop the inversion mania. This article provides a detailed description of the many new hurdles to doing an inversion. As will be seen, the task is not an easy one and anyone being asked to participate should be aware of these hoops to be jumped through—and how they will be addressed—before spending any significant time or money on an inversion effort.

Philip R. Hirschfeld is an attorney with Ruchelman P.L.L.C. and concentrates his practice in the areas of foreign investment in U.S. real estate, cross-border investments by U.S. companies operating abroad, and income tax planning for high net-worth individuals. He may be contacted at hirschfeld@ruchelaw.com.

On April 4, 2016, the Treasury Department issued a third round of new rules under Section 7874¹ aimed at halting the wave of inversions that have allowed U.S.-owned multinational groups to restructure their global organization in order to lower U.S. taxes.² In an inversion, a U.S. parent corporation of a multinational group is replaced with a foreign parent corporation; the inversion is often structured as a merger of the U.S. parent into an affiliate of the foreign parent corporation with the shareholders of the U.S. parent getting stock of the foreign parent in that merger, as illustrated in Figure 1 (see next page).

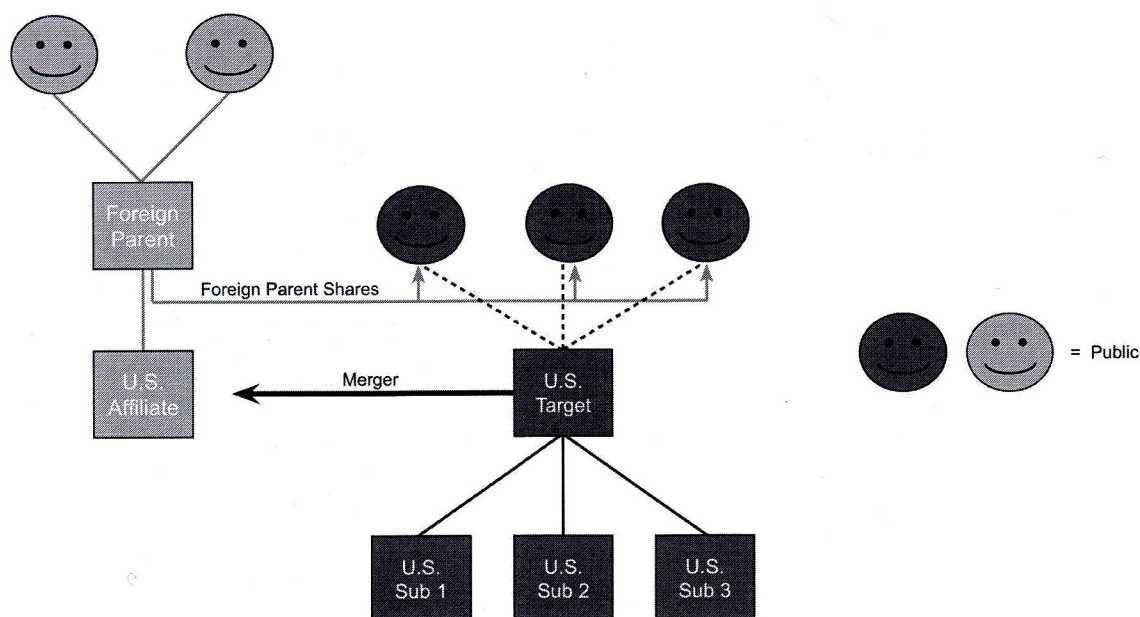

While the IRS had previously issued rules under Section 7874³ aimed at stopping inversions, those efforts did not succeed in halting all inversion activity, as illustrated by the \$160 billion Pfizer-Allergan merger announced earlier this year that was set to close later this year. In its most recent action, Treasury issued regulations under these two notices and

¹ References to Sections are to sections of the Internal Revenue Code of 1986, as amended (the "Code"), and the regulations thereunder, unless otherwise indicated.

² On the day of the release, Treasury Secretary Jacob J. Lew announced, "Today, we are taking further action to make it more difficult to invert." U.S. Department of the Treasury, "Remarks by Treasury Secretary Jacob J. Lew on a Press Conference Call Regarding Announcement on Corporate Tax Inversions" (U.S. Dept. of the Treasury, Press Release, Apr. 4, 2016), available at <https://www.treasury.gov/press-center/press-releases/Pages/j10406.aspx>.

³ Notice 2014-52 (Sept. 22, 2014) and Notice 2015-79 (Nov. 19, 2015).

Figure 1: Typical Inversion Structure

also made some changes aimed at bolstering their impact.⁴ This recent action also expanded upon the earlier efforts. Tellingly, within 24 hours after the new regulations were released, Pfizer and Allergan announced that their merger was scuttled as a result.⁵

A major change introduced by the new regulations was the addition of a rule that disregards certain stock attributable to prior acquisitions of other U.S. companies (the “Multiple Domestic Entity Acquisition Rule”) in computing whether a current transaction is subject to Section 7874.⁶ The Multiple Domestic Entity Acquisition Rule will thwart efforts to increase the value of the foreign corporation (such as Allergan) by acquisitions of other companies made within three years of the signing of an agreement to participate in an inversion transaction. In a potential merger of a U.S. corporation (such as Pfizer) into a foreign corporation (such as Allergan), this new rule requires the enhanced value of the foreign corporation arising from these prior acquisitions to be removed from the

calculation of the percentage interest acquired by the former shareholders of the U.S. corporation in the combined company. The result of this new rule is to increase the percentage ownership interest of the shareholders of the target, which makes the transaction more likely to be subject to Section 7874. In addition, Treasury added the “Multiple-Step Acquisition Rule” aimed at halting multiple-step transactions that were designed to circumvent the inversion rules.⁷

Apart from these inversion rules, Treasury also took extra steps that can have an impact on *any* international tax planning involving related-party debt. In an unexpected move, Treasury ignored Section 163(j), the earnings stripping provision,⁸ and issued proposed regulations under Section 385.⁹ While Section 385 directly addresses debt-equity classification issues, it

⁷ Treas. Reg. § 1.7874-2T(e).

⁸ Earnings stripping occurs when a foreign shareholder of a U.S. corporation lends money to the U.S. corporation and the interest paid to the shareholder is not subject to 30 percent U.S. withholding tax. The goal is to create an interest deduction for the U.S. corporation and allow U.S. earnings to totally escape U.S. taxation. IRC § 163(j) is targeted toward earnings stripping, and if it is applicable, no current deduction will be allowed to the U.S. corporation for all or part of interest paid on that loan.

⁹ Prop. Treas. Reg. §§ 1.385-1, 2, 3, & 4. (Editor’s note: For a discussion of state tax implications of these proposed regulations, unrelated to inversions, see John P. Barrie, “SALT Advisors Need to Understand New Proposed Section 385 Regulations,” p.37 of this issue.)

⁴ Treas. Reg. §§ 1.304-7T, 1.367(a)-3T(c)(3)(iii)(C), 1.367(b)-4T, 1.956-2T(a)(4), 1.7701(l)-4T(h), 1.7874-1T(h)(2), 1.7874-2T(l)(2), 1.7874-3T(f)(2), 1.7874-4T(k)(1), 1.7874-6T(h), 1.7874-7T(h), 1.7874-8T(i), 1.7874-9T(g), 1.7874-10T(i), 1.7874-11T(f), and 1.7874-12T(b).

⁶ Treas. Reg. § 1.7874-8T.

was dormant for decades, with no regulations issued under it apart from a set of regulations that were withdrawn in 1983.¹⁰ The proposed regulations target debt issued as a dividend to a foreign shareholder as well as related-party debt that was not issued to finance an acquisition. The Section 385 proposed regulations permit the IRS to bifurcate a debt instrument into part debt and part equity, and add certain documentation requirements for large corporate groups. These proposed regulations can apply to any transaction and are not limited to inversions.

SECTION 7874 FRAMEWORK TO CHALLENGE INVERSIONS

In 2004, Congress enacted Section 7874 in order to halt abuses associated with inversion transactions.¹¹ An inversion occurs when a U.S. corporation (or partnership) becomes a subsidiary of a foreign acquiring corporation (FA),¹² and the shareholders of the U.S. corporation (or partners in the U.S. partnership) continue to own an interest in FA. Among other post-acquisition planning techniques, the foreign subsidiaries previously owned by the U.S. parent can then be transferred to FA, which eliminates potential U.S. tax on dividends and the impact of the controlled foreign corporation (CFC) rules.

The key factor under Section 7874 is whether FA will be treated as a surrogate foreign corporation, which will activate several limitations (e.g., any “inversion gain” will be fully taxable from the date the acquisition begins until 10 years after its completion, with only limited offset by losses and tax credits). Section 7874(a) provides that FA will be a surrogate foreign corporation if, pursuant to a plan or series of related transactions, the following conditions are met:

- FA acquires, directly or indirectly, substantially all of the properties held directly or indirectly by a domestic corporation or substantially all the properties constituting a trade or business of a domestic partnership.
- After the acquisition, at least 60 percent of the stock (by vote or value) of FA is held by former shareholders or partners of the domestic entity (DE) by reason of their former ownership of DE (the “ownership percentage test”).

¹⁰ T.D. 7920, 1983-2 C.B. 69.

¹¹ P.L. 108-357, 118 Stat. 1418 (2004).

¹² Prior to adoption of IRC § 7874, an inversion could also occur if the U.S. parent corporation reincorporated into a foreign country with all its shareholders continuing to own stock in the reincorporated company. IRC § 7874, as discussed above, did away with this planning technique by treating the reincorporated company as a U.S. corporation. IRC § 7874(b).

- After the acquisition, FA’s “expanded affiliated group” (EAG) fails to meet the substantial business activities test, which works as an overall exception to Section 7874.

In determining the ownership percentage, the “ownership fraction” is referred to in the regulations and commentary. The ownership fraction has as its numerator the value (or vote) of the stock of FA acquired by the former shareholders of DE (the target U.S. corporation or partnership), and the denominator is the value (or vote) of all the stock of FA after the acquisition of DE is completed. For purposes of this computation, stock issued in a “public offering” is excluded from computation of this ownership fraction.¹³ In addition,

The proposed regulations target debt issued as a dividend to a foreign shareholder as well as related-party debt that was not issued to finance an acquisition. The Section 385 proposed regulations permit the IRS to bifurcate a debt instrument into part debt and part equity, and add certain documentation requirements for large corporate groups.

Section 7874(c)(4) provides that “[t]he transfer of properties or liabilities (including by contribution or distribution) shall be disregarded if such transfers are part of a plan a principal purpose of which is to avoid the purposes of [Section 7874.]”

Section 7874(b) further provides that if the first and third conditions above are met and at least 80 percent of the stock of FA (by vote or value) is held by former owners of DE by reason of their historic ownership, FA will be treated as a domestic corporation for all federal tax purposes.

NEW MULTIPLE DOMESTIC ENTITY ACQUISITION RULE

Reason for Action. Treasury wanted to close down a planning strategy, used by some foreign companies, in which multiple acquisitions of unrelated U.S. target corporations are made over time. This strategy allowed the foreign companies to avoid application of Section 7874, since each acquisition was analyzed on its own.¹⁴ The major factor for determining if

¹³ IRC § 7874(c)(2)(B).

¹⁴ T.D. 9761, Explanation of Provisions, I(B)(3) (April 8, 2016).

an inversion occurs is the ownership percentage that the shareholders of the U.S. target have in the foreign acquiring company. That ownership percentage is based on the ownership fraction noted above:¹⁵ The numerator of this fraction is the value of the stock in the foreign company owned by the former shareholders of the U.S. target company, and the denominator is the value of all the stock in the foreign company owned by all shareholders after the acquisition.¹⁶

In a typical situation, the value of the stock of first U.S. target corporation to be acquired is small enough such that the shareholders of that first U.S. target do not own 60 percent or more of the foreign

In a typical multiple-domestic-entity acquisition transaction, after each acquisition, the value of the foreign company is increased, thus allowing it to acquire a larger U.S. target company, in a separate undertaking at a later time, without causing Section 7874 to apply.

company. And, after that acquisition, the value of the foreign company is increased. As a result, the foreign company can acquire a larger U.S. target company, in a separate undertaking at a later time, without causing Section 7874 to apply.

After this second acquisition, the value of the foreign company stock owned by the shareholders of the second target would be less than 60 percent (or 80 percent). However, that percentage of interest would exceed 60 percent (or 80 percent) if the first acquisition were either disregarded or collapsed together with the second acquisition. There is a regulation that can collapse the two acquisitions into a combined transaction if they are part of a *plan* to acquire both companies. However, such a plan may not exist or, even if it does, may be very difficult to find, so this regulation has not been as useful as initially anticipated.¹⁷

Treasury has now decided that certain prior acquisitions of U.S. corporations should be backed out of the computation of the denominator of the ownership

fraction. This revised computation can push an acquisition into being an inversion subject to Section 7874.

Action Taken. The new Multiple Domestic Entity Acquisition Rule set forth in Treasury Regulation Section 1.7874-8T will exclude from the denominator of the ownership fraction an amount equal to the sum of the “excluded amounts” computed separately with respect to each “prior domestic entity acquisition” and each “relevant share class.”¹⁸

A prior domestic entity acquisition is any acquisition of a domestic corporation made within the 36-month period ending on the signing date for the acquisition unless an exception applies.¹⁹ An exception to this rule applies if the shareholders of the acquired domestic entity consequently hold less than 5 percent (by vote and value) of the stock of the foreign company and the fair market value of the foreign company did not exceed \$50 million on the date the domestic entity was acquired.²⁰

The determination of each excluded amount is done by a three-step process:²¹

1. The total number of shares of FA stock, outstanding after the prior domestic entity acquisition, must be calculated (“total number of prior acquisition shares”).
2. For each relevant share class, the total number of prior acquisition shares must be adjusted to account for redemptions in the period after the completion date of the prior domestic entity acquisition, ending on the day prior to the completion date of the relevant domestic entity acquisition (“the general redemption testing period”).²²
3. For each relevant share class, the total number of prior acquisition shares, as adjusted, is multiplied by the fair market value of a single share of stock of the relevant share class, as of the completion date of the relevant domestic entity acquisition (the product is “an excluded amount”).²³

¹⁸ Treas. Reg. § 1.7874-8T(b)

¹⁹ Treas. Reg. § 1.7874-8T(g)(4)(i).

²⁰ Treas. Reg. § 1.7874-8T(g)(4)(ii).

²¹ Treas. Reg. § 1.7874-8T(c).

²² Treas. Reg. § 1.7874-8T(e)(1). The number of redeemed shares is then multiplied by the redemption fraction (the product is the “allocable redeemed shares”). The numerator of the redemption fraction is generally the total number of prior acquisition shares, and the denominator is the sum of: (i) the number of outstanding shares of F.A. stock as of the end of the last day of the redemption testing period and (ii) the number of redeemed shares during the redemption testing period. Treas. Reg. § 1.7874-8T(d)(2).

²³ Treas. Reg. § 1.7874-8T(c).

¹⁵ Treas. Reg. § 1.7874-12T(a)(17).

¹⁶ The ownership percentage also has an alternate test based on vote, as previously discussed. Since the vote test can be more easily manipulated to prevent an inversion, practitioners have put greater focus on the value test when trying to avoid an inversion. As a result, the balance of this article will only refer to the value test for ease of presentation.

¹⁷ Treas. Reg. § 1.7874-2(e).

that have completed certain transactions described in Section 7874. The adopted Section 7874 regulations incorporate these rules with some changes. Significant modifications are discussed below.

Disregarded Stock Attributable to Passive Assets. Treasury was concerned that certain taxpayers were targeting foreign corporations with a value that was attributable to substantial passive assets rather than business assets. That type of cashbox foreign corporation would serve as the foreign acquiring corporation with the goal of removing the transaction from the application of Section 7874.³¹ Since the passive assets were already held by the foreign

Treasury was concerned that certain taxpayers were targeting foreign corporations with a value that was attributable to substantial passive assets rather than business assets. That type of cashbox foreign corporation would serve as the foreign acquiring corporation with the goal of removing the transaction from the application of Section 7874.

corporation, the full value of the foreign corporation, including the value attributable to the passive assets, would be reflected in the denominator of the ownership fraction. The First Notice indicated that regulations would be issued to halt the use of foreign cashbox corporations.

Treasury Regulation Section 1.7874-7T incorporates this rule and identifies certain foreign corporation stock, which has substantial value and is attributable to passive assets. That stock is disregarded in determining the ownership fraction. If more than 50 percent of the gross value of all "foreign group property" is "foreign group nonqualified property," a portion of the stock of the foreign acquiring corporation is excluded from the denominator of the ownership fraction.³² When triggered, this rule will skew the ownership fraction in the direction of the former shareholders of the domestic acquired corporation so that Section 7874 may apply.

De Minimis Rule. One comment received by Treasury was concern that this passive assets rule could apply to a case where the former shareholders of the U.S. target company get only a *de minimis* amount of

stock in the foreign acquiring company.³³ The regulations address this point by adding a *de minimis* rule that applies if:

- The ownership percentage of the former shareholders is less than 5 percent measured by vote or value; and
- The former domestic entity shareholders own less than 5 percent of any member of the EAG headed by the foreign acquiring company.³⁴

Effective Date. This regulation generally applies to transactions undertaken after September 22, 2014.³⁵

Disregarded Pre-Transaction Distributions by a Domestic Target. The so-called anti-skinnying rule of the First Notice would disregard any non-ordinary course distribution (NOCD) made by the domestic entity during the 36-month period ending on the acquisition date.³⁶ This rule applies to all distributions, regardless of whether they are treated as dividends for tax purposes.³⁷ For example, a spin-off described in Section 355 would be a distribution subject to this rule.

Treasury Regulation Section 1.7874-10T incorporates this rule and, in determining the ownership fraction, disregards certain NOCD's made by a domestic entity in the 36-month period before the inversion.³⁸ This means that former shareholders (or former partners) of the domestic entity (or former domestic entity partners) are treated as receiving additional stock of the foreign acquiring corporation when the domestic entity has made one or more NOCDs.

For this purpose, an NOCD is any distribution within a look-back year in excess of the NOCD threshold for that look-back year.³⁹ A look-back year is generally each 12-month period within the 36-month period ending on the completion date.⁴⁰ The distribution history period referred to below means, with respect to a look-back year, the 36-month period preceding the start of the look-back year.⁴¹ In both

³² Treas. Reg. § 1.7874-7T(b).

instances, adjustments are made for corporations with a shorter period of existence.

NOCD Threshold. The NOCD threshold is generally equal to 110 percent of the distributions made within the distribution history period, multiplied by a fraction in which the numerator is the number of days in the look-back year and the denominator is the total number of days in the distribution history period.⁴²

The regulations incorporate comments regarding the effect of post-distributions fluctuation in value:

Accordingly, post-distribution fluctuations in the value of the stock or interests of the domestic entity, as applicable, or the value of the distributed property (for example, in the case of a spin-off), do not affect the amount of . . . stock that is deemed received.⁴³

Effective Date. This regulation generally applies to transactions undertaken after September 22, 2014.⁴⁴

Subsequent Transfers of Foreign Acquiring Corporation Stock. In determining the ownership percentage, Section 7874(c)(2)(A) and Treasury Regulation Section 1.7874-1 provide that certain stock held by members of the EAG that includes the foreign acquiring company will not be taken into account in either the numerator or the denominator of the ownership fraction.⁴⁵ To ensure that these rules are not used as a device to avoid an inversion, Treasury Regulation Section 1.7874-5T, issued in 2012, indicates that stock that was acquired with the intent to carry out an inversion will not lose that status if it is subsequently transferred. As a result, the transferred stock will be included in the determination of the ownership percentage.

In the First Notice, Treasury said it will supplement these rules by issuance of an additional rule applicable to stock of the foreign acquiring corporation that is:

- Received by a former owner of the U.S. target company; and
- Later transferred in a transaction related to the inversion.

That stock will be included in both the numerator and the denominator of the fraction, subject to two

exceptions involving U.S.-parented groups and foreign-parented groups.⁴⁶

U.S.-Parented Group Exception. Treasury Regulation Section 1.7874-6T incorporates these rules, but makes one helpful change by providing that the U.S.-parented group exception applies even if the common parent of the EAG changes after the transaction.⁴⁷ The U.S.-parented group exception applies if:

- Before and after the acquisition, the transferring corporation (or its successor) is a member of a U.S.-parented group; and
- After the acquisition, the person that holds the transferred stock, the transferor of such stock, and the foreign company that acquired the U.S. target company

Treasury Regulation Section 1.7874-6T provides that the U.S.-parented group exception applies even if the common parent of the EAG changes after the transaction.

are all members of a U.S.-parented group headed by any of the following corporations: the original U.S. parent, another U.S. member of that group, or a new U.S. company formed in the overall transaction.⁴⁸

Foreign-Parented Group Exception. The Treasury declined to accept a request for a change to the definition of a foreign-parented group to permit a restructuring. The foreign-parented group exception applies if:

- Before the acquisition, the transferring corporation and the domestic entity are members of the same foreign-parented group; and
- After the acquisition, the transferring corporation is a member of the EAG or would be a member of the EAG absent the subsequent transfer of any stock of the foreign acquiring corporation by a member of the foreign-parented group in an acquisition-related transaction.⁴⁹

Effective Date. This regulation generally applies to domestic entity acquisitions completed on or after September 22, 2014.⁵⁰

⁴² Treas. Reg. § 1.7874-10T(h)(7).

⁴⁸ Treas. Reg. § 1.7874-6T(c)(1).

⁴⁹ Treas. Reg. § 1.7874-6T(c)(2).

⁵⁰ Treas. Reg. § 1.7874-6T(h).

Application of Section 956. Section 956 provides that a U.S. shareholder of a CFC may recognize income if the CFC makes an investment in U.S. property. Treasury expressed concern that an inverted domestic corporation could divert earnings from the U.S. group by having its foreign subsidiaries make loans to, or acquire stock of, a foreign affiliate outside the U.S.-parented chain. To prevent this money from bypassing the U.S. shareholder's tax return, the First Notice said that regulations will be adopted to require income inclusion under Section 956 in these situations.

Anti-Hopscotch Rule. Treasury Regulation Section 1.956-2T(a)(4)(i) incorporates this anti-hopscotch rule. If an expatriated foreign subsidiary (e.g., a CFC

The CFC status of an expatriated foreign subsidiary is preserved despite a later stock issuance by that expatriated foreign subsidiary to a related non-CFC foreign person.

subsidiary of a domestic corporation that was acquired in an inversion) acquires an obligation or stock of a non-CFC related foreign corporation during the applicable period, the obligation or stock is treated as U.S. property under Section 956. The applicable period⁵¹ is the 10-year period beginning on the date of acquisition of the domestic corporation.

Treasury expanded the foregoing concept by including in the scope of the rule any obligation or stock of the related foreign corporation acquired in a "transaction related to the inversion transaction."⁵² As a result, an obligation or stock acquired *before* the applicable period is covered by this rule if made in contemplation of the inversion.⁵³

Consistent with the First Notice, the regulation provides that if the expatriated foreign subsidiary is a guarantor or pledger of debt of the non-CFC related foreign person, then the CFC is treated as holding an obligation of the non-CFC person.⁵⁴ As a result, income recognition may then occur for the domestic corporation.

Effective Date. This regulation generally applies to obligations or stock acquired after September 22, 2014.⁵⁵

Preventing De-Control of CFC Stock. U.S. companies that are targets of inversions usually have many foreign corporate subsidiaries that are CFCs. The First Notice described certain specified transactions that may be undertaken, after the inversion, to de-control an expatriated foreign subsidiary so that it no longer is a CFC. The First Notice also indicated that regulations would be adopted to stop any tax benefits that such de-control may afford.⁵⁶

Treasury Regulation Section 1.7701(l)-4T adopts these de-control rules.⁵⁷ Under these rules, the CFC status of an expatriated foreign subsidiary is preserved despite a later stock issuance by that expatriated foreign subsidiary to a related non-CFC foreign person. For example, a transaction by which an expatriated foreign subsidiary issues stock to a related foreign person for cash will generally be re-characterized so that:

- The cash is deemed contributed by the related foreign purchaser of the stock to the U.S. inverted company; and then
- The U.S. inverted company contributes the cash to the expatriated foreign subsidiary in exchange for a deemed issuance of stock.⁵⁸

As a result, the U.S. ownership of the expatriated foreign subsidiary is not reduced and it continues to be a CFC. Similar rules are adopted to prevent loss of CFC status due to the transfer of stock in the expatriated foreign subsidiary to a related person.⁵⁹

Exceptions. The regulation adopts two exceptions to the rules set forth in the First Notice.⁶⁰ The regulations add a new *de minimis* rule that can apply if at least 90 percent of the pre-transaction ownership in the expatriated foreign subsidiary is maintained, excluding the percentage of stock owned by non-CFC related persons.⁶¹ The regulations also contain a special rule that can unwind the impact of CFC status if the disregarded stock in the expatriated foreign subsidiary is later transferred to an unrelated person.⁶²

⁵⁶ Notice 2014-52, § 3.02.

⁵⁷ T.D. 9761, Explanation of Provisions, II(B)(1)(b) (Apr. 8, 2016).

⁵² Treas. Reg. § 1.956-2T(a)(4)(i)(C)(2).

⁵³ T.D. 9761, Explanation of Provisions, II(A)(2)(a) (Apr. 8, 2016).

⁵⁴ Treas. Reg. § 1.956-2T(c)(5).

⁵⁵ Treas. Reg. § 1.956-2T(i).

Effective Date. This regulation generally applies to specified transactions occurring on or after September 22, 2014, but only if the inversion was *completed* on or after such date.⁶³

Preventing Dilution of Ownership Under Section 367 Regulations. Under Section 367(b) a shareholder that exchanges stock of a foreign corporation for stock of another foreign corporation in certain tax-free transactions must include the Section 1248 amount in income as a deemed dividend, if the exchange results in (1) loss of CFC status for the foreign corporation that issued the exchanged stock or (2) loss of Section 1248 shareholder status for the shareholder involved in the exchange.⁶⁴ The Section 1248 amount is the portion of the CFC's non-previously taxed earnings and profits.⁶⁵ The First Notice provided that a stock dilution rule would be adopted, which would extend this deemed-dividend treatment to certain nonrecognition transactions that occur after an inversion even if the transaction does not result in loss of CFC status or Section 1248 shareholder status.

This stock dilution rule is adopted in Treasury Regulation Section 1.367(b)-4T(e),⁶⁶ but with two new exceptions.⁶⁷ The first exception is built into the definition of specified exchanges and provides that this new rule does not apply if the exchanging shareholder is neither an expatriated entity nor an expatriated foreign subsidiary.⁶⁸ The second exception is a *de minimis* rule.⁶⁹

The temporary regulations also adopt a rule that can require income recognition for any unrealized gain if an expatriated foreign subsidiary transfers specified property to a foreign transferee corporation in a Section 351 transaction.⁷⁰

This income recognition rule is generally applicable to exchanges completed after November 19, 2015, but only if the inversion was completed on or after September 22, 2014. However, the new Section 351 rule and certain other changes apply to transfers occurring on or after April 4, 2016.⁷¹

Preventing Repatriation of Untaxed Earnings Under Section 304 Regulations. The First Notice addressed

certain transactions that taxpayers are thought to engage in after an inversion in order to reduce a CFC's earnings and profits to facilitate a subsequent repatriation of cash or other property of the CFC in a tax-free manner.⁷² Treasury Regulation Section 1.304-7T addresses this concern, effective for transactions completed on or after September 22, 2014.⁷³

An example in the regulations illustrates when this rule applies.⁷⁴ In the example, FA, a foreign corporation that is not a CFC, owns 100 percent of a domestic corporation (DT) that has \$51 of earnings and profits. DT owns 100 percent of a CFC (FS1) that has \$49 of earnings and profits. FA sells the DT stock to FS1 for \$100. Section 304(a)(2) applies to the sale, so the \$100 cash is treated as a distribution in redemption of DT stock owned by FA. Under prior law, the \$49 of FS1's earnings and profits would have been eliminated and the \$100 cash would have been

The new temporary regulation preventing the repatriation of untaxed earnings was adopted based on transactions undertaken following an inversion, but is not limited to transactions that are a part of an inversion transaction.

treated as a foreign-source dividend, not subject to U.S. tax. Under the temporary regulations, FS1's earnings and profits are not eliminated and the \$100 of cash is treated as a U.S.-source dividend to the extent of DT's \$51 of earnings and profits.

As noted above, this new rule was adopted based on transactions undertaken following an inversion. However, this temporary regulation is not limited to transactions that are a part of an inversion transaction. As a result, it can have greater impact.

ADOPTION OF REGULATIONS DESCRIBED IN NOTICE 2015-79

Notice 2015-79 (the "Second Notice") described regulations that the Treasury intended to issue to address transactions that would avoid the purposes of Section 7874, and also address tax avoidance by corporate groups that have completed certain transactions described in Section 7874. The adopted Section 7874 regulations incorporate these rules with some changes. Significant modifications are discussed below.

⁶³ Treas. Reg. § 1.7701(l)-4T (h).

⁶⁴ Treas. Reg. § 1.367(b)-4(b).

⁶⁵ Treas. Reg. § 1.367(b)-2(c).

⁶⁶ T.D. 9761, Explanation of Provisions, II(B)(2) (Apr. 8, 2016).

⁶⁷ T.D. 9761, Explanation of Provisions, II(B)(2)(c)(ii) (Apr. 8, 2016).

⁶⁸ Treas. Reg. § 1.367(b)-4T(e)(2).

⁶⁹ Treas. Reg. § 1.367(b)-4T(e)(3).

⁷⁰ Treas. Reg. § 1.367(b)-4T(f).

⁷¹ Treas. Reg. § 1.367(b)-4T(h).

⁷² T.D. 9761, Explanation of Provisions, II(B)(4) (Apr. 8, 2016).

⁷³ Treas. Reg. § 1.304-7T(e).

⁷⁴ Treas. Reg. § 1.304-7T(d), Ex. 1.

The “Third-Country Rule.” The Second Notice addressed adoption of a Third Country Rule,⁷⁵ and it is incorporated in Treasury Regulation Section 1.7874-9T. The Third-Country Rule involves a scenario in which a domestic entity is combined with an existing foreign corporation under a new foreign parent corporation that is a tax resident of a “third country.”⁷⁶ The likely impact of this rule is to cause the new foreign parent company to be treated as a U.S. corporation unless the former shareholders of the domestic entity own less than 60 percent of the foreign parent company.

Some background is needed to understand the reason for this new rule. A foreign corporation may want to acquire a U.S. target corporation in exchange for its stock, but at the same time, the foreign corporation may want to restructure by establishing a new foreign parent holding company for the group with a tax residence that is different from that of the existing foreign corporation. In these circumstances, a new third-country parent acquires the stock of the existing foreign corporation, and the shareholders of the existing foreign corporation receive more than 20 percent of the stock of the new third-country parent. At the same time, the new third-country parent acquires the stock of the domestic entity, and the shareholders of the domestic entity receive less than 80 percent of the stock of the new third-country parent.

In the Second Notice, the IRS said that such a “third-country transaction”

generally is driven by tax planning, including the facilitation of U.S. tax avoidance following the acquisition. For example, the third country may have a more favorable income tax treaty . . . with the result that U.S. withholding taxes on dividends, interest, and royalties paid by the domestic entity may be reduced or eliminated.⁷⁷

Under this rule, if a third-country transaction occurs, the stock issued to the old shareholders of the existing foreign company is ignored in determining the ownership percentage of the former shareholders of the U.S. target in the new foreign parent.⁷⁸ A third-country transaction will generally occur if:

- The former shareholders of the U.S. target company get 60 percent or more of the stock of the new foreign parent company (“share ownership test”);

- The new foreign parent company also acquired a foreign target company in the same transaction; and
- The foreign parent company is subject to tax in a country other than the country in which the foreign target company is taxed.⁷⁹

Continuity of Interest Test. The regulations adopt a share ownership (or continuity of interest) test rather than a test based on gross value of assets, which was set forth in the Second Notice. As a result, the new parent company will generally be classified as a domestic company if the former shareholders of the U.S. target company now own 80 percent or more of the shares of the new parent company.

Effective Date. This regulation generally applies to transactions undertaken on or after November 19, 2015. However, for transactions completed on or after November 19, 2015, but before April 4, 2016, taxpayers can elect to determine whether there has been a third-country transaction by use of the gross asset test in the Second Notice rather than the continuity of interest test in the regulations.⁸⁰

Ownership Percentage Exclusions. A key factor in determining whether an inversion occurs is the ownership percentage. This invites planning to try to either increase the denominator or decrease the numerator to lower the ownership percentage. Section 7874(c)(2)(B), the “statutory public offering rule,” provides that stock issued in a public offering that is related to the acquisition of a U.S. target company (e.g., the funds raised in the public offering are used by the company to finance the acquisition of the U.S. target company) is excluded from the denominator.

Disqualified Stock. Treasury Regulation Section 1.7874-4T(b), adopted on January 16, 2014,⁸¹ provides that disqualified stock is not included in the denominator of the fraction, subject to a *de minimis* exception. Disqualified stock includes stock of a foreign acquiring company that is transferred for “non-qualified property” when that exchange is related to the inversion transaction. Nonqualified property⁸² includes cash and marketable securities, as well as any other property “acquired with a principal purpose of avoiding the purposes of [Section 7874].”⁸³

⁷⁵ Notice 2015-79, § 2.02(b).

⁷⁶ T.D. 9761, Explanation of Provisions, I(B)(4)(a) (Apr. 8, 2016).

⁷⁷ Notice 2015-79, § 2.02(b).

⁷⁸ Treas. Reg. § 1.7874-9T(b).

⁷⁹ Treas. Reg. § 1.7874-9T(c). See also Treas. Reg. § 1.7874-9T(f), Example.

⁸⁰ Treas. Reg. § 1.7874-9T (g).

⁸¹ T.D. 9654 (Jan. 16, 2014).

⁸² Treas. Reg. § 1.7874-4T(i)(7).

⁸³ Treas. Reg. § 1.7874-4T(i)(7)(iv) (“avoidance property”).

The Second Notice expressed concern that some taxpayers “may be narrowly interpreting the definition of avoidance property.”⁸⁴ To address those situations, the Second Notice indicated that the definition of avoidance property would be modified to add the words “regardless of whether the transaction involves an indirect transfer of property.” This change was adopted in revised Treasury Regulation Section 1.7874-4T(i)(7)(4).⁸⁵

Most importantly, Treasury added an example to illustrate how this may apply.⁸⁶ In the new example, a foreign partnership transfers certain business assets to a new foreign corporation in exchange for 25 of its shares, and at the same time, the shareholders of the U.S. target company transfer their stock in the domestic target to new foreign corporation in exchange for the remaining 75 shares of the foreign corporation. The example concludes that the 25 shares issued to the foreign partnership were issued for avoidance property and, thus, those 25 shares are disqualified stock. As a result, the former shareholders of the domestic target own 100 percent of the new foreign corporation, which is caught by the inversion rules and is treated as a U.S. corporation.

Effective Date. This change is effective for acquisitions completed on or after November 19, 2015.⁸⁷

Substantial Business Activities. Section 7874 does not generally apply if the EAG that includes the foreign acquiring company conducts “substantial business activities” in the country where the foreign acquiring company is formed.⁸⁸ Treasury Regulation Section 1.7874-3, adopted on June 3, 2015,⁸⁹ sets forth rules for determining if substantial business activities are conducted. Substantial business activities will exist if at least 25 percent of the group’s employees, assets, and income are derived in the relevant foreign country.⁹⁰

The Second Notice indicated that this regulation would be modified so that the “subject to tax” rule will be met only if the foreign corporation is also a resident of that foreign country.⁹¹ Treasury Regulation Section 1.7874-3T(b)(4) adopted this rule without

making any substantive changes, and is effective for acquisitions after November 19, 2015.⁹²

Inversion Gain. If an inversion occurs, Section 7874(a)(1) provides that, for any taxable year during the the 10-year period after the inversion, the taxable income of the expatriated U.S. entity will not be less than the inversion gain for that year. This rule does not allow the expatriated entity to use a net operating loss (NOL) carryforward to offset the inversion gain. Inversion gain includes the income or gain recognized by the expatriated entity on a direct transfer of stock or other property from the inversion transaction or a license by the expatriated entity that was entered into as part of the inversion transaction.⁹³

If an inversion occurs, Section 7874(a)(1) provides that, for any taxable year during the 10-year period after the inversion, the taxable income of the expatriated U.S. entity will not be less than the inversion gain for that year.

Concern Regarding Indirect Stock Transfers. The Second Notice indicated that Treasury would issue regulations that will provide that income or gain attributable to “indirect” transfers of stock or property by an expatriated entity, or an “indirect” license, will also be included as part of inversion gain. Treasury was concerned that such indirect transfers may also remove “foreign operations from U.S. taxing jurisdiction while avoiding current taxation contrary to the policy underlying [the inversion rules].”⁹⁴ For example, after an inversion, a CFC owned by the expatriated U.S. entity may sell property to the foreign acquiring entity in a transaction that generates Subpart F income to the expatriated U.S. entity. This Subpart F income is not classified as inversion gain under the Code. Therefore, it might be sheltered from tax by use of a NOL carryforward if this indirect transfer rule were not adopted.

Treasury Regulation Section 1.7874-11T adopts rules for determining inversion gain. The definition of inversion gain includes gain attributable to the “direct or indirect transfer of stock or other properties or license of any property either as part of the [inversion transaction], or after such acquisition if the transfer or license is to a specified related person.”⁹⁵ In response

⁸⁴ Notice 2015-79, § 2.03.

⁹⁴ Notice 2015-79, § 3.01((b).

⁹⁵ Treas. Reg. § 1.7874-11T(b).

to a comment,⁹⁶ Treasury Regulation Section 1.7874-11T(b)(1) provides that inversion gain includes amounts treated as dividends under Section 78 with respect to foreign taxes deemed to be paid by an expatriated entity under Section 902(a) or Section 960(a)(1).

Effective Date. This regulation generally applies to transfers or licenses of property completed on or after November 19, 2015, but only if the inversion transaction was completed on or after September 22, 2014.⁹⁷

⁹⁶ T.D. 9761, Explanation of Provisions, II(C)(2) (Apr. 8, 2016) (emphasis added).

⁹⁷ Treas. Reg. § 1.7874-11T (f).

CONCLUSION

The latest attempt to close down inversions has seen its first success story in the termination of the planned Pfizer-Allergan merger. While they are not prone to the same public exposure, there are likely many other inversions in the planning stages that will never see the light of day as a result of Treasury's actions. As we have also mentioned, Treasury opened up a whole new front on the battle against inversions with its release of proposed regulations under Section 385 that take aim at related-party debt. Investors will need to keep a watchful eye on taxes before they again consider investing in or financing inversions. ■
